SKINNOVATION

Problem!!!

Skincare is a range of practices that support skin integrity, enhance its appearances and relieve skin conditions. It is the prevention of dermatitis and other skin diseases. Experts usually perform non-invasive screening test only with naked eye thus reducing the accuracy of their diagnosis . But we are going to find the attack of the disease with the help of deep learning techniques. We are going to localize and classify multiple diseases in a single image.

SKINNOVATION

Solution!!!

We are going to localize the location in which the disease is present and classify what the disease is? using the deep learning techniques and methodologies. We are going to do it with and without segmentation and see which gives the better accuracy.
